

Refiner or Strontium Injection System

- Grain refiner and/or strontium injection system in trough; automatic, precise, redundant and faultless

BENEFITS

- Optimal quality of metal, with precise supply of refiner or strontium
- No more production losses due to lack of product
- Reduced coil replacement time
- No more blockages even with strontium (binding material)
- Integrated and faultless security
- Automatic dosing according to casting recipes

TECHNICAL FEATURES

- Control system in communication with PLC of casting machine
- Up to 4 independent wire feeding modules
- Control and reading of speed of each wire
- Blockage detection and automatic activation of redundancy line
- Frictionless wire guide to prevent jamming
- Quick-change reel holder and cartridge
- End of reel detection
- Safety guards and latch system
